Introduction

Our project is designed as an online portfolio website. Users can create their own portfolio, show their background information, achievements and resume by text, pictures and videos. This project is web-based and developed by spring framework for back-end and react for front-end. The server is built by Microsoft Azure, the technical details will be introduced in the following sections.

Forty-Two is the ASCII code for the asterisk symbol, being a wildcard for everything. The team expects users could put their entire experience into their portfolio, get more opportunities for jobs. The logo has nine squares, the eight small squares represent personal information, personal description, tags, education, working experience, resume, introduction video and projects experiences. The big solid square represents the user's future, which is filled with promise and possibilities.

There are five people in develop team and two groups of the client. During the development, the team will have three meetings with each of the clients in each sprint beginning, get design ideas and feedbacks. In addition, the team will have a stand-up meeting with the supervisor every week, review the works has been done during the last week. The team will set the plan for the sprint based on the feedback from the supervisor and clients. Moreover, the developing team has three scheduled meetings per week, team members working on their own work based on their role in the team. At the end of each sprint, the team will have a review meeting, summarize the achievements and what needs to be improved in the future.

After the whole project developed, there will be recording to demonstrate the functions of the website. An overall review will be discussed with future potential development.
